Final OSTESA EU meeting is almost happening!

OSTESA EU partnership will meet in Matosinhos, Portugal, for the final project transnational meeting. The agenda will focus in presenting the English final versions of the OSTESA EU products in order to empower project partners on how to use them properly. This will then maximise the dissemination and multiplication effect and increase chances of companies to exploit the project's results. The meeting will be on June 8th.

Online tool has been tested!

The OSTESA EU organisational climate assessment tool was tested between October 2017 and February 2018. During these months, around 245 employees and SME's owners and managers from 52 different companies have benefited from the colour association assessment method as well as from the statement assessment method. The tool is now integrating the feedback received in the evaluation form and will be ready to exploit in June 2018.

Flexible training solutions were piloted!

The OSTESA EU programme toolkits were piloted this year between March and April. From the 15 pilot sessions carried in Poland, Czech Republic, Italy, Cyprus and Portugal, around 142 participants had the opportunity to train 2 or 3 of the 11 organisational climate dimensions. At the same time, around 47 managers and 83 employees had the chance to share experiences, views and debate how can they improve their organisational climate.
